The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation (Contd. on page 5)
**Trade name:** 430 Anti-Slip Decking Oil

### Material of gloves

The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

### Penetration time of glove material

The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.

#### For the permanent contact gloves made of the following materials are suitable:

- Nitrile rubber, NBR
- Recommended thickness of the material: ≥ 0.4 mm
- For the mixture of chemicals mentioned below the penetration time has to be at least 480 minutes (Permeation according to EN 374 Part 3: Level 6).

#### As protection from splashes gloves made of the following materials are suitable:

- Nitrile rubber, NBR

#### Eye protection:

If risk of splashing:

- Safety glasses according to EN 166:2001 (e.g. densely closing frame glasses with side protection)

#### Body protection:
